

2J UNIVERSITY CLASSES OF 2026

HVAC 101

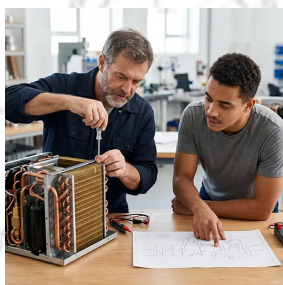

Build the skills to start your HVAC career with **HVAC 101**, an introductory course for entry-level technicians and those new to the industry, covering residential heating, ventilation, and air conditioning fundamentals and basic service practices.

You'll learn:

- Refrigeration, heat transfer, airflow, indoor air quality, electrical fundamentals, and safety
- How furnaces, heat pumps, air conditioners, and ventilation equipment work
- How system components work together
- Common tools, materials, wiring diagrams, and schematics
- Routine maintenance and basic troubleshooting

Gain confidence with safe work practices, hand and diagnostic tools, and essential HVAC terminology. Leave with the knowledge and practical skills to take your first step in the field.
